Introduction and Orientation Objectives

The *University of Illinois Medical Center* is committed to provide a comprehensive, job specific orientation for every staff person working within the Medical Center - including employees, students and agency staff. The purpose in developing the 'Medical Center Core Orientation Manual' (for paid and non-paid students and Agency staff) is to familiarize you, the student and/or Agency staff, with the Medical Center's core organizational values, policies and procedures and regulatory compliance practices and to ensure that you have all of the tools to successfully and safely carry out your responsibilities within the Medical Center. The information found in this manual complies with the orientation requirements as outlined in the Medical Center Policy and Procedure (HR 1.03) and all other applicable policies and procedures at the University of Illinois Medical Center at Chicago as of July 1, 2009. The Medical Center responds to changing regulatory requirements and operational needs as necessary. For this reason, the information published in this manual is subject to change. If you have any questions pertaining to this orientation material, please follow-up with your supervisor/preceptor. In the event your supervisor/preceptor is unable to answer questions to your satisfaction, your supervisor will direct you to the appropriate individual and/or department.

The information presented in this manual is consistent with the information presented to new employees at our Medical Center Core Orientation. All of the topics outlined in the manual are posted with additional detail on the Human Resources website

http://www.hospital.uic.edu/hrs/new_site/employment.shtml. Please carefully review all of the information found in the manual. If you have any questions, please feel free to contact me or my staff for assistance.

For additional information or assistance regarding any component of your University of Illinois Medical Center Orientation, please contact:

Welcome to the Medical Center

Open in 1913, The *University of Illinois Medical Center* has evolved into the state's largest teaching hospital and Illinois' largest and most active healthcare facility - caring for over 20,500 inpatients, 447,100 outpatients and 55,600 emergency room patients each year. The *University of Illinois Medical Center* provides a higher level of care and individual attention to patients and their families, giving special consideration to their unique medical challenges, emotional needs and cultural sensitivities. Our diverse medical teams bring the world's latest advancements to patient care, research and teaching.

Our physicians' breadth of expertise coupled with the latest advances in technology help provide an integrated continuum of care - from preventive medicine and routine check-ups to highly specialized surgeries and innovative treatments. We are one of the area's most trusted providers of maternal and child health services, offering superior obstetric services, a special care nursery and a dedicated pediatric unit. We maintain award-winning centers of excellences for women and children. Our healthcare teams collaborate with each other and with referring professionals to provide superior care to the people of Illinois and beyond. We welcome you to our Medical Center team and wish you success in your student and agency staff responsibilities and future professional achievements.

University of Illinois Medical Center at Chicago Facts and Figures

- 495 Bed Hospital with 15 Outpatient Centers--created by state statute to meet the educational needs of the Colleges
- Six Health Science Colleges: Applied Health Sciences, Dentistry, Medicine, Nursing, Pharmacy and Public Health
- Part of the largest medical school in the country
- Provides primary and multi-specialty care for children and adults, treating a broad range of medical conditions
- Employees: 3,100 FTEs
- Physicians: 450 Attending Staff; 350 Residents
- FY10: 18,223 discharges, 115,470 patient days, 442,289 clinic visits, 12,978 operations performed, 41,176 ER visits
- Operational environment: State Civil Service System & 4 Employee Unions

University of Illinois Medical Center Mission, Vision and Values

Mission

Health Care Delivery - Teaching - Research

The Mission of the *University of Illinois Medical Center* is to support essential teaching and research functions of the academic units of the University's Health Sciences Center. We must provide the best of care in accordance to the highest standards of hospital accreditation having at all time the well-being of the patient as the highest concern.

Vision

We will be true to our commitment to the people of Illinois to provide compassionate, high quality health care and be an acclaimed leader in advancing the art and science of medicine.

Values

The *University of Illinois Medical Center at Chicago* holds the following as tantamount values of our institution:

Integrity

We respect the dignity and worth of everyone by maintaining the highest degree of ethical and moral conduct.

Innovation

We welcome change because it provides the opportunity for students to learn, faculty to conduct research, and staff to improve our organization and the communities we serve.

Service Excellence

We are courteous and responsive to the needs of our patients and customers and strive to exceed their expectations.

Safety

We earn the public's trust by fostering an environment dedicated to the safety of our patients, staff, and guests.

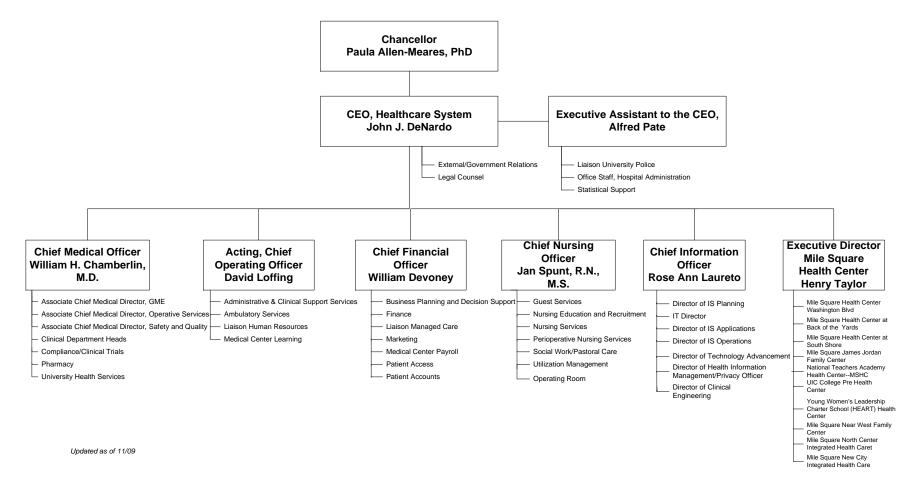

Accountability

We are responsible for achieving organizational results by maximizing our human, financial, and material resources.

UNIVERSITY OF ILLINOIS AT CHICAGO HEALTHCARE SYSTEM TABLE OF ORGANIZATION

Medical Center Safe/Healthy Workplace Culture

The University of Illinois Medical Center Leadership promotes optimum behavior by creating an atmosphere where interdisciplinary team collaboration can occur. We support a harmonious environment where all patients and employees treat each other with respect, dignity and honesty. We believe that:

- the manner in which we treat each other contributes to effective communication and maintenance of a professional, safe and effective work environment;
- our interactions can directly impact patient perceptions of our institution, engagement in their care and willingness to choose us as their preferred care provider;
- inappropriate communication can create situations whose errors are more like to occur;
- all individuals have the right to be treated with respect, courtesy and dignity;
- verbal communication shall be respectful in tone and content at all times and promote high standards of professionalism. All work-related communication with patients, visitors, customers, clients and co-workers shall be restricted to the common language of English.
- all practitioners and employees are expected to refrain from disruptive, abusive or otherwise inappropriate behavior towards, patients, employees, visitors and other practitioners.

UIMC strives to maintain a work environment free from intimidating demeaning, abusive or disruptive behavior. 'Disruptive Behavior' is defined as conduct that intimidates others working in the organization to the extent that quality and safety are compromised. Disruptive/unacceptable behavior undermines a healthy work environment that supports patient safety and teamwork. This behavior interferes with effective communication among all members of the healthcare team and negatively impacts performance and favorable outcomes.

A Medical Center 'Professional Code of Conduct' has been developed (see MCMPP LD 4.13 below) and every Medical Center staff is expected to read/review the policy on an annual basis. Any recipient of disruptive behavior should report the behavior/incident in the MIDAS occurrence system (available through UIMC Intranet Website) or the compliance hotline (866-665-4296). All reports will remain confidential. A report will be sent to the responsible supervisor in the chain of command for follow up in a similar fashion to a patient occurrence report. The Risk and Safety Department will monitor disruptive behavior events through the MIDAS system for tracking and trending purposes.

THE UNIVERSITY OF ILLINOIS AT CHICAGO University of Illinois Medical Center Chicago, Illinois

PAGE: 1 of 4

UNIVERSITY OF ILLINOIS AT CHICAGO MEDICAL CENTER MANAGEMENT POLICY AND PROCEDURE

NO.: LD 4.13

APPROVAL DATE: February 17, 2010 **EFFECTIVE DATE**: February 17, 2010

SUBJECT: UIMC Code of Conduct

OBJECTIVE

To promote optimum, behavior within the Medical Center by creating an atmosphere where interdisciplinary team collaboration can occur. The code of conduct pertains to all employees. For purposes of this code of conduct "employees" is defined as the entire workforce of the medical center which includes medical staff, staff, students, volunteers regardless of whether they are employed by the medical center.

POLICY

The manner in which we treat each other contributes to effective communication and maintenance of a professional, safe and effective work environment. Our interactions can directly impact patient perceptions of the institution, engagement in their care and willingness to choose us as their preferred care provider. Inappropriate communication can create situations where errors are more likely to occur. All individuals have the right to be treated with respect, courtesy and dignity. All practitioners and employees are expected to refrain from disruptive, abusive or otherwise inappropriate behavior towards patients, employees, visitors and other practitioners. UIMC strives to maintain a work environment free from intimidating, demeaning, abusive or disruptive behavior. These behaviors undermine a healthy work environment that supports patient safety and teamwork. This policy will describe acceptable, disruptive and inappropriate behavior and the action to be taken when behavior does not meet the standard.

This process does not replace appropriate management or supervisory actions to intervene, coach, counsel, or discipline.

All incidents will be reported to the Professional Conduct Committee via this process, regardless of whether other actions of a disciplinary nature have been taken or are anticipated.

In order to facilitate safe and appropriate care for patients and clarity of understanding among all employees and members of the healthcare team all work-related communication with patients, visitors, customers, clients, and co-workers shall be restricted to the common language of English. The exception will be cases in which it is necessary to communicate with patients, visitors, customers, or clients for whom communication/translation in a language other than English is appropriate. Verbal communications shall be respectful in tone and content at all times and promote high standards of professionalism.

Leadership promotes a harmonious environment where all patients and employees treat each other with respect, dignity, and honesty. Effective communication can be promoted via rounding, team training, team huddles, debriefings, simulation, and role modeling.

Reporting will be done in a non-punitive environment so that behaviors can be addressed and improved. Retaliation against any person making a report in good faith or making a disclosure of information as it relates to disruptive behavior is prohibited.

DEFINITIONS

Culture of Safety—Communication characterized as open and respectful among all members of the healthcare team in order to provide safe patient care. It is a culture that supports organizational commitment continually seeking to improve safety.

Acceptable behavior—Behavior that creates and fosters a positive, collaborative, supportive, safe environment among all employees. It promotes integrity, trustworthiness, and respect which are the core principles of treating others with civility and decency. Acceptable behavior supports the mission of UIMC and requires open, respectful and non-punitive communication within the Medical Center.

Unacceptable/Disruptive Behavior—Behavior that interferes with effective communication among all members of the healthcare team and negatively impacts performance and favorable outcomes. Such behavior is not supportive of a culture of safety. Unacceptable/disruptive behavior may compromise safe, quality patient care, either directly or indirectly, as it affects the ability of individuals to perform within an emotionally safe and supportive environment.

As this behavior can take many forms it is impossible to provide an exhaustive list of examples. All persons performing duties within the Medical Center are expected to support the UIMC code of conduct by reporting unacceptable or disruptive behavior through their chain of command.

Examples of unacceptable/disruptive behaviors include, but are not limited to:

- Abusive behavior of any kind, including both verbal and nonverbal such as profanity, intimidation or personal attacks leveled at others.
- Threats of violence, assault/battery, intentionally damaging property, inappropriate touching or gestures, or throwing objects, instruments or equipment.
- Communication addressed to its recipient in such a way as to intimidate, undermine confidence, or belittle violates the spirit and intent of this policy. Gossiping is one example of this type of communication.
- Communication: Foul or offensive language must not be used in the workplace.
- Non-verbal communication which may include eye-rolling, body language, sighing, negative mood, etc.
- Intentional violations of medical center/university policies and procedures that support patient safety in the organization.
- Deliberate avoidance or refusal to perform assignments, functions and/or duties and responsibilities that are a part of ones' job expectation. For example obstruction or intentional delay in the care of a patient.
- Inappropriate comments or illustrations made in patient medical records or other official documents, reflecting disparaging remarks about the quality of care in the medical center, or attacking other practitioners, staff, or policies.

PROCEDURE

Managing Unacceptable/Disruptive Behavior

- I. Any patient, visitor, or employee who observes or is the recipient of unacceptable or disruptive behavior as defined in this policy can report the incident(s) or behavior(s). The report will be documented via the MIDAS occurrence system, or the compliance hotline. All reports will be confidential.
- II. The report will be sent to the responsible supervisor within the chain of command for follow up in a similar fashion to a patient occurrence. All discussion shall remain confidential among the involved parties and shared on an as needed basis. The Risk and Safety Department shall monitor the reports through the Midas system for tracking and trending purposes.
- III. Oversight will be provided by the Professional Conduct Committee which will review reports and trends, and make recommendations to appropriate supervisors for corrective action when indicated. Unfounded reports will be dismissed; all others will be investigated by a Director, Manager or Service Chief.
- IV. Actions taken against substantiated unacceptable/disruptive behavior will vary based on the level of severity and will be performed within the context of systems already established within the medical center and university, such as medical staff discipline and fair hearing procedures. Flagrant violations of the UIMC Code of Conduct will be responded to immediately by the immediate supervisor.
- V. The following departments may be asked to consult on an as needed basis:
 - A. Office of Access and Equity, Dispute Resolution Services including mediation services
 - B. University Health Service,
 - C. Employee Assistance Services,
 - D. Human Resources, etc.
- VI. Every person working in the Medical Center is expected to sign the code of conduct policy similar to the patient confidentiality or ethics act certification. This will be completed annually via the LMS system, or current staff/physicians training, and for new hires during New Employee orientation.

Workplace Safety

The *University of Illinois at Chicago* Police Department is a full-service police department. University police officers possess all of the powers of municipal police officers and county sheriffs including the power to make arrests on view and on warrants. They enforce state statutes and municipal ordinances on and off campus and university regulations on campus. They have the authority to stop and challenge anyone with probable cause (*Illinois Compiled Statutes* 110 305/7). The mission of the University Police Department is to promote and maintain public security and order under law and to foster a sense of safety and well being in the campus community. The Police Emergency number is 312-355-5555 and Non-emergency number is 312-996-2830.

When Should You Call the Police?

- If you observe or have knowledge of dangerous, suspicious or criminal activity, call the police. Don't hesitate. Call the Police first and others second.
- If you observe what you think may be a serious safety hazard, call the police.
- The University Police work for you. So, don't be one of those individuals who 'didn't want to bother the police'. If you are uncertain, call the police.
- Confidentiality is a basic part of the University Police job. If you don't want to get involved, you can still call the police.

Personal Safety

The University of Illinois Medical Center is a safe place to study, work, live and visit. Remember, personal safety begins with awareness and common sense precautions should be taken such as:

- Always be aware of your surroundings. Avoid dangerous situations by taking reasonable precautions.
- When walking at night, use well-lighted and well-traveled routes. Don't take short cuts!
- After dark, walk with friends or acquaintances.
- After hours, use the free Red Car service or Student Patrol escort service.
- Know the location of the 'Startel' emergency telephone kiosks around campus. Pushing the button on a kiosk causes a blue strobe light to flash and puts you in voice communication with the alarm center. Other alarms are located in elevators, offices and restrooms.
- Before entering your vehicle, look inside.

If You Are Attacked

- Scream as loud as you can. Run away if you can. If you can't flee, strike at the attacker aiming for vital spots and make it hurt.
- If attacked from behind, dig down into the attacker's instep or shins with your heel. Batter the attacker's face with the back of your head. Grab the attacker's finger and bend it backwards hard. Run away.
- If cornered by an armed assailant, do not resist. Be calm, cooperate.

Protecting Your Property

- Never leave your possessions unattended. Theft is a crime of opportunity and the number one crime on campus. Unattended, unlocked offices or rooms, and unattended property in libraries attract thieves.
- Always lock your vehicle.

- Never leave valuables visible in your car.
- Register, chain and lock your bicycle.
- Report suspicious people to the police.

Escort Service/Red Car

The University Escort Service/Red Car provides transportation to university employees, students, visitors and other authorized individuals between university facilities and points of public transportation or resident facilities with a designated area during the hours of 11 PM to 7 AM daily. Individuals must possess a valid UIC I-card. The 'Red Car' operates with the following boundaries: Halsted Street on the east, Western Avenue on the west, Eisenhower Expressway on the north and 14th Place on the south. Transportation can be secured by calling University Police at 312-996-6800.

Student Patrol Escort Service

Student Patrol acts as the 'eyes and ears' of the police and handles routine calls for service. Student Patrol is deployed 24 hours a day at pass desks and on roving patrols throughout the campus. They also lock and unlock buildings and perform after-hour escorts. Student Patrol offers a walking escort service available to university employees, students, visitors and other authorized individuals between university buildings and university-owned property in the immediate campus area. Escort requests are made by calling University Police at 312-996-2830.

For additional information or assistance regarding Workplace Safety at the University of Illinois Medical Center at Chicago, please contact:

Officer Craig Moran Police Officer, Community Relations 245 PS, MC 268

Phone: (312)996-6779
Fax: (312)413-2617
Email: <u>cjmoran@uic.edu</u>

Regulatory Compliance

The *University of Illinois Medical Center* is mandated to abide by regulatory compliance standards set forth by internal as well as external regulatory agencies - The Joint Commission, federal government/HIPAA, etc. The compliance requirements and standards that the *Medical Center* must comply with are described in the following pages.

The Joint Commission evaluates and accredits more than 15,000 health care organizations and programs in the US. Joint Commission accreditation is recognized nationwide as a symbol of quality that reflects an organization's commitment to continually meeting certain performance standards. One of the Joint Commission's standards requires that the Organization 'provides initial orientation' to all staff in order to promote safe and effective job performance. The Joint Commission further defines staff as 'all people who provide care, treatment and services in the organization, including those receiving pay (e.g., permanent, temporary and part-time personnel as well as contract employees), volunteers and health profession students.' Therefore, you must be knowledgeable of and adhere to the *Medical Center* polices as outlined in this orientation.

The Joint Commission and/or other external regulatory agencies may conduct unannounced site visits at any time. All staff (including student employees, volunteers and agency staff) must continuously be prepared for a site visit - announced or unannounced. Preparation includes:

- Completion of all required orientation processes: including health screening, completion of Core Orientation competencies, and obtaining and displaying a Medical Center ID badge.
- Review of your personnel file(s) on a periodic basis to ensure that documentation and information is current.
- Knowledge of information/potential questions that an external surveyor may pose.

Medical Center Mandatory Regulatory Compliance Training Learning Management System (LMS) <u>Paid Students ONLY</u>

Every new Paid Student must receive orientation on the key elements of Infection Control, Patient Safety, Fire Safety, Emergency Management, and Patient Confidentiality prior to staff provision of care, treatment, and services. During the orientation process, Paid Students must complete these four (and other) courses in the Medical Center Learning Management System (LMS) within 2 business days of hire.

These regulatory compliance courses are taken to maintain compliance with The Joint Commission Standards, Hospital Policy and Procedures, OSHA and other Federal Regulations. Additionally, Paid Students must complete these regulatory compliance courses on an annual basis with the training year beginning July 1 and a course completion date of September 30.

Paid Students will receive e-mail notification of the Regulatory Compliance training requirements from the Medical Center Learning Department along with instructions on LMS login and helpdesk procedures. The Medical Center LMS can be accessed via a Quick Link on the Medical Center homepage or by going directly to http://uic.ehealthcareit.us. Upon receiving the e-mail notification, please login to complete the courses as soon as possible.

For additional information or assistance regarding accessing the Medical Center Learning Management System, please contact:

Learning Management HelpDesk

Hours: 8 AM - 4:30 PM Phone: (312) 996-8393 Email: MCLMS@uic.edu

University of Illinois Medical Center at Chicago Code of Ethics (LD 1.03)

The *Medical Center* has established a Code of Ethics in recognition of the institution's responsibility to our patients, staff, volunteers, physicians and the community we serve. Our institutional values relate specifically to ethics in Patient Care, Professional Conduct and Clinical Decision Making, Confidentiality, External Relations and Billing Practices.

Patient Care: We recognize the dignity and worth of everyone with whom we interact. We will involve patients and family members in decisions regarding the care they receive. We will inform patients of therapeutic alternatives and risks associated with the care they are seeking.

Professional Conduct and Clinical Decision Making: We will protect the integrity of clinical decision making.

Confidentiality: Patient information will not be shared in an unauthorized manner and sensitive information will only be shared with individuals authorized to review and act on such information.

External Relations: We will fairly and accurately represent ourselves and our capabilities to the public.

Billing Practices: We shall distribute accurate, comprehendible and timely bills to patients and payers.

Addendum A: University of Illinois Statement of a Drug-Free Workplace

False Claims Act

In 1986, Congress rejuvenated a Civil War-era law - False Claims Act - adding amendments to strengthen it and creating incentives for private citizens with evidence of fraud to commit their time and resources to supplement the government's efforts. As a result, a powerful public-private partnership for uncovering fraud against the government was put into play. A 'false claim' is a claim that cheats the government. It can be charging for tests and procedures never performed, performing unnecessary medical procedures in order to get increased reimbursement, double-billing for tests, billing Medicaid or Medicare for procedures that should have been charged to a research grant, doctoring time records, winning a contract through kickbacks and bribes, forging a physician's signature to gain government reimbursement, and many other acts of omission and commission.

In 2005, President Bush signed the Deficit Reduction Act of 2005. This act requires that, by January 1, 2007, Medicaid providers shall:

(A) Establish written policies for all employees of the entity and of any contractor or agent of the entity, that provide detailed information about the False Claims Act, administrative remedies for false claims and statements, any State laws pertaining to civil or criminal penalties for false claims and statements, and whistleblower protections under such laws, with respect to the role of such laws in preventing and detecting fraud, waste, and abuse in Federal health care programs.

(B) Include as part of such written policies, detailed provisions regarding the entity's policies and procedures for detecting and preventing fraud, waste, and abuse; and

(C) "Include in any employee handbook for the entity, a specific discussion of the laws described in subparagraph (A), the rights of employees to be protected as whistleblowers and the

entity's policies and procedures for detecting and preventing fraud, waste, and abuse."

Steps already have been taken to meet all of these requirements. The Medical Center

Compliance Program and its policies are described at the Medical Center Compliance web site.

University Policies can be found by visiting Ethics Office Policies
http://www.hospital.uic.edu/docs/compliance/ethics office outline.html

A "Whistleblower" is one who reveals wrongdoing within an organization to the public or to those in positions of authority. However, an employee first must reasonably believe that a violation of law, gross mismanagement, gross waste of funds, abuse of authority, or substantial and specific danger to public safety or health has occurred.

Patients, visitors and employees are encouraged to communicate problems, complaints, and concerns about suspected unlawful practices. The Medical Center Guest Service Department handles patients and family complaints. Additionally, the University's confidential Hot Line may be used. For employees, the first individuals that should be contacted are the employee's own supervisor or the supervisor of the service involved. If employees are uncomfortable talking to these individuals, they should use the confidential Hot Line or contact more senior managers or administrators.

Federal, State and local whistleblowing statutes protect an employee who has initiated an investigation of an employer's activities or who has otherwise cooperated with a regulatory agency in carrying out an inquiry or the enforcement of regulations from discharge or discrimination. In addition, the University has explicit policies that protect the whistleblower that, in good faith, brings forward suspicions of unlawful activity.

HIPAA PRIVACY/SECURITY

The Health Insurance Portability & Accountability Act of 1996 (HIPAA) was designed to prevent inappropriate use and disclosure of an individual's health information and to require organizations which use health information to protect that information and the systems which store, transmit, and process it.

Under HIPAA, the patient's health information is restricted to individuals who have a need to know, a reason to know or permission for access to such data/information. The Medical Center has identified individuals responsible for the monitoring and administration of security and privacy of all protected health information (PHI) - Privacy Officer (312-355-5650) and Security Officer (312-355-4583).

Access to PHI is role defined. Certain categories of employees have unlimited access (i.e., Nurses, Physicians, Pharmacy Staff and Therapists). Remember - unlimited access is not equivalent to authorized access. You must always have a need to know, a reason to know or permission to access patient data/information.

Access to PHI is based on:

- Need to Know (Clinical)
- Reason to Know (Administrative)
- Permission to Know written authorization to access patient information is obtained from the patient, designated family member or patient representative

Privacy/Confidentiality Best Practices:

- Remain mindful of the presence of others when discussing patient care.
- Do not disclose patient information to visitors without the patient's authorization.
- If visitor is not authorized to obtain patient information, keep information as general as possible.
- Ensure that patient data is password protected all communication including phone, in person and written.
- Ensure printed patient information is secure when being transported. Carry documentation face down or in a manner that ensures that patient data is not visible.

HIPAA Sanctions:

Employees and students found to have violated HIPAA will be disciplined in accordance with the *Medical Center's* policies. The type of sanction imposed will depend on the intent of the individual as well as the severity of the violation - IM 4.17 HIPAA Sanctions Policy. Sanctions, including civil/criminal prosecution and/or monetary fines, may be imposed to the individual and/or the *Medical Center* for violation of patient confidentially/privacy. Sanctions may include:

• Monetary compensation to the Individual for any damages arising as a result of a breach of confidentiality.

Disciplinary Action up to and including termination or any other penalties as necessary.

Reporting Privacy/Security Breaches

Notify the Privacy Office or your Department Security Contact (DSC) of a suspected HIPAA violation and provide:

- Date and time of suspected violation
- Detailed description of suspected violation

Addendum B: UIMC Confidentiality Agreement Employee/Volunteer/Student

UIC Office for Access and Equity

The Office for Access and Equity (OAE) represents the University campus to federal and state agencies as well as to the higher education community on issues related to affirmative action, equal opportunity, harassment and diversity. They collaborate in the development of the campus' Affirmative Action Plan, and assist in the recruitment and retention of women, men and women of color, persons with disabilities and other under-represented groups.

In addition, the OAE staff offer training in sexual harassment awareness, AA/OAE, the Americans with Disabilities Act and other related topics as needed. They also provide technical advice to faculty, students, staff and administrators on diversity issues as well as problems regarding discrimination and harassment; counsel faculty, staff, and students who believe they may have been subjected to harassment or discrimination; conduct investigations and complaints of unlawful discrimination in admission, employment, and access as well as treatment in UIC-sponsored programs and activities.

Sexual Harassment Defined

Sexual Harassment includes any <u>unwanted</u> sexual gesture, physical contact or statement that is offensive, humiliating, or that interferes with a required job, academic, and/or career opportunity at the University.

Understanding Sexual Harassment

(1) Quid pro quo

- "This for That" request for sexual favors in exchange for job benefits or opportunities; looks at whether there is a tangible job action
- Only a supervisor or manager can commit quid pro quo harassment.

(2) Hostile environment

• Atmosphere that interferes with an individual's work and/or academic performance or creates an intimidating hostile or offensive academic or work environment.

Behaviors that contribute to a hostile environment include:

- Unfulfilled threats to impose a sexual guid pro guo
- Discussing sexual activities
- Telling off-color jokes
- Unnecessary touching
- Commenting on physical attributes
- Displaying sexually suggestive pictures
- Using demeaning or inappropriate terms, such as "babe"

UIC's sexual harassment policy prohibits unwelcome sexual conduct in the classroom, office and other work locations. This policy applies off premises as well as long as the individual(s) is engaged in University related business or University sponsored events

Age Discrimination in Employment Act (ADEA)

Federal law (ADEA), state law and UIC policy all prohibit discrimination based on age. ADEA applies to individuals 40 years and older.

Americans with Disabilities Act (ADA)

Prohibits discrimination against qualified individuals because of their disabilities or handicap

- In employment
- Participation in academic programs
- Receiving services offered to the public
- Denying access to building or services

Duty to provide a reasonable accommodation to an otherwise qualified individual:

Any change in the work environment or in the way things are customarily done, which is not unduly burdensome that enables an individual with a disability to enjoy equal employment opportunities.

Protected Categories: Other Laws and Policies

UIC's Non-Discrimination policy includes several other categories:

- Religion
- Marital Status
- Veterans' Status
- Disabled Veterans'
- Sexual Orientation

OAE has the responsibility to investigate and advise on internal complaints of discrimination and harassment; grievances (may include allegations of discrimination); and informal disputes (supervisor's right/responsibility to intervene in co-worker disputes).

Addendum C: UIC Non-Discrimination Statement

Addendum D: Statement of Commitment to Persons with Disabilities

UIC Reasonable Accommodation Policy

UIC Sexual Harassment Policy

Quality Improvement

Quality is a never ending cycle of continuous improvement!

The *University of Illinois Medical Center* has an organization-wide Quality Plan which is based on the five Medical Center goals - employer of choice; provider of choice; operational efficiency; organizational compliance; and national recognition. Executive Leadership oversees the implementation of the Quality Plan and continuously evaluates organization-wide progress. Every area has a Quality Plan that includes quality indicators related to the five Medical Center goals.

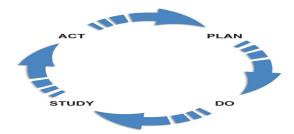

The *PDSA (Plan-Do-Study-Act)* model is used to identify quality indicators and measure processes. The specific components of the PDCA model include:

P = Plan what you want to improve.

D = Do a test to see how well your idea works.

S = Study the results of your test and then act accordingly. What does the data tell you to do?

A = Act to roll out improvements, or adapt your plan and try again, or abandon the plan and develop a new one.

Evaluate the results of each plan you test, implement positive changes and start the cycle over again to continuously improve. Ask your preceptor what quality indicators have been established for your area and how you can improve quality. Additional information is also available on the Quality website - http://www.hospital.uic.edu/qual_accredit/index.shtml

For additional information and assistance regarding the implementation of Quality at the University of Illinois Medical Center, please contact:

Maureen Perry Director - Quality & Accreditation 833 S Wood St Room B52

Phone: (312)996-7788 E-mail: <u>mtperry@uic.edu</u>

Patient Safety & Risk Management

Modern healthcare, by nature, is a high-risk, error-prone activity. According to the Institute of Medicine 48,000 - 98,000 patients die each year as a result of medical errors. Patient Safety is a core *University of Illinois Medical Center* value. It is the intent of the Risk Management program to enhance the safety of patients, visitors and employees; and minimize the financial loss to the Medical Center through risk detection, evaluation and prevention. The Risk Management Department's 'scope of service' encompasses:

- Safety (development of safe systems);
- Risk assessment (proactive assessment in the origination of risk and safety issues);
- Occurrence investigation and reporting (conduct Root Cause Analysis/RCA and investigations of intensive events).

The Joint Commission National Patient Safety Goals

- Verify patient identification prior to treatment, procedure, lab and specimen collection and the administration of a blood product using the following process
 - o Check the ID bracelet for name and DOB or ask patient to verbalize
 - Name and DOB should be matched to the same patient identifiers appearing in the medication or treatment order, or specimen container
 - Label containers used for blood and other specimens in presence of the patient.
- Improve the effectiveness of communication among caregivers.
- Improve the safety of using medications.
- Develop, reconcile and communicate an accurate medication list across the continuum of care.
- Reduce the risk of patient harm resulting from falls.
- Encourage patient involvement in care.
- Identify safety risks inherent in patient population.
- Improve recognition and response to changes in a patient's condition.

What do I report to Risk Management?

Staff can report any situation that could or did result in harm to a patient, employee or visitor of the Medical Center.

For additional information and assistance regarding the implementation of Risk Management at the University of Illinois Medical Center, please contact:

Patient Safety Hotline: 3-4RSK (3-4775)

Infection Control

Standard Precautions are implemented in the care of all patients (hospitalized and ambulatory clinic) to protect health care workers from infectious microorganisms.

- In order to practice Standard Precautions, personnel protective equipment (PPE) is available for you to wear. PPE must be worn if contact with blood and body fluids is anticipated. PPE includes gowns, gloves, and masks with eye protection and are located on all nursing units. You, as a student doing a clinical rotation, may need to wear PPE. So, determine the location of PPE supplies.
- The most important part of Standard Precautions that you will be practicing is hand hygiene. It is important that you practice hand washing or using the alcohol hand rub <u>before</u> and <u>after</u> contact with a patient or the patient's environment and after glove removal.
- There is no eating or drinking allowed in any patient care areas.

Isolation Precautions

- <u>Transmission Based Precautions</u>: used in addition to Standard Precautions to prevent transmission of infectious microorganisms spread by airborne, droplet or contact routes.
 - <u>Contact Precautions</u>: microorganisms are spread by contact with dry skin or environmental surfaces (linen, equipment, bed rails, etc).
 - Isolation requires the patient to be placed in a private room. The health care worker is required to wear gloves upon entering the room. A gown should be worn if clothing will touch the patient or environment. Both gown and gloves should be removed prior to leaving the patient's room.
 - Hand hygiene must be performed after removing protective clothing & before leaving the patient's room or upon leaving the room, using the hand alcohol rub (located on the wall outside patient rooms).
 - The health care worker should leave all personal items (pens, papers, stethoscope, etc.) outside the room.
 - Airborne Precautions: microorganisms are spread by inhalation of small droplet nuclei.
 - Isolation requires the patient to be places in a private negative pressure room with the door closed.
 - The health care worker must wear an N-95 respirator. Note: the health care worker must have medical clearance by University Health Service (UHS) and be fit-tested for the N-95 respirator.
 - <u>Droplet Precautions</u>: microorganisms are spread by large droplets propelled a short distance (usually 3-5 feet) through the air via coughs, sneezes, while suctioning, etc. The droplets must reach the conjunctiva, nasal mucosa or mouth of the susceptible host.
 - Isolation requires the patient to be places in a private room or at least 5 feet from any roommate.
 - The health care worker must wear a mask with fluid shield if within 5 feet of the patient. A gown is required if respiratory secretions will contaminate clothing.

Exposure to a Patient's Blood or Body Fluid

While working with a patient, you could get exposed to that patient's blood and body fluids. If this happens, go into the patient's bathroom and wash the site that the exposure occurred at. If the exposure was to mucous membranes, flush with water. Next, find out the name of the patient whose fluids you came in contact with. Report this exposure to your instructor or preceptor.

Remember: You must go to University Health Services or the Emergency Room for further follow-up and treatment (as indicated) and to complete an occurrence report.

Your Health

- You must be immune to measles, mumps, rubella and varicella (chicken pox) to do your clinical rotation at the medical center. You should provide documentation of this immunity to your instructor or proctor.
- The best rule of thumb is, if you are sick, have a fever or diarrhea, do not come to work with patients at the Medical Center until you are feeling well.
- If you develop any communicable diseases such as pertussis, do not come to work with patients at the Medical Center until you have been cleared from University Health Services.

Addendum E: Infection Control Basics - Personal Protective Equipment

Addendum F: Infection Control Basics - Bloodborne Pathogen Standard

Addendum G: Tuberculosis Control: How To Protect Yourself and Others

Emergency Preparedness/Fire Safety

Reporting An Injury - Report all on the job injuries

- Get medical help
- Fill out the "Supervisor's First Report of Injury" within 24 hours.

Needle Safety - Report ALL needle sticks

- Never recap a needle
- Once a needle is uncapped, dispose of it in the needle box even if it's not used

Back Injury Prevention - Don't lift an object if:

- It's too heavy
- It's too big

Get help if you need it.

Watch Your Step - Falls happen:

- When we don't clean up.
- When we don't look where we are going.

If you see a spill, call 6-3688 and report it.

Electrical Safety

- Do not use extension cords. Outlet strips can be used.
- Red Outlets are for patient care use only.

Hazardous Chemicals

- Obtain MSDS (Material Safety Data Sheets) from your supervisor.
- Wear appropriate personal protective equipment.

UIC Smoking Policy

- Smoking is not allowed in any building on the UIC campus.
- Smoking is not allowed in the path of travel in and out of buildings.

Fire Safety

- R Rescue anyone in danger "Code Red" Don't endanger yourself
- A Activate the alarm
- C Close all doors
- E Evacuate to a safe location

If you must fight a fire:

- P Pull the pin
- A Aim the nozzle: At the base of the fire
- S Squeeze the handle
- S Sweep back and forth

What does the fire alarm sound like?

- Tones In the hospital & EEI
- Horns In OCC and all other buildings

Fire Drills- Know your evacuation route

Listen to the alarm

- Determine the location
- Fill out an observer's form

Disaster Preparedness

All personnel working for the Medical Center may be called upon for assistance during an activation of the Emergency Management Plan (EMP). Some events that could cause activation of the EMP may necessitate the evacuation of patients, staff and visitors. During these incidents, it is very important that personnel who are called upon for assistance are familiar with the EMP and the tasks they may need to perform to safely evacuate patients, visitors, staff, medical equipment, medical supplies and medical records. Additional references include:

- *University of Illinois Medical Center* Disaster Manual available in every department and online at http://www.hospital.uic.edu
- Unit specific Internal Disaster Plan available on each respective unit

Emergency Codes

• Code Red - Fire

Listen for location and respond appropriately

Code Helper - Evacuation

1 person from each unit

Code Pink - Infant Abduction

Observe hallways

Code Cerner - Computer

Manual entry and logging of patient care

• Code Decon - ER Emergency

Decon Team report to the ER

Key Phone Numbers

6-3688 - Environmental Services Building related problems 5-5555 - UIC Police & Chicago Fire Dept. Anytime there is danger

Guest Services

At the *University of Illinois Medical Center*, we do our best to ensure our customer's comfort and confidence by making our hospital a friendly, helpful and tranquil place. Guest Services, whose primary objective is to enhance the patient/visitor experience, encourages a hospitality approach to everything we do.

Guest Services provides:

- Patient representatives to assist with patient needs
- Processes to conduct investigations of patient complaints and grievances
- Staff to notarize documents
- Special parking fares for family members of patients
- Locked boxes to deposit patient belongings
- Customer services programs for patients

Hospital's Information Desk 7:00am-9pm M-F

8:00am-9pm Sat-Sun

Volunteer Services 9:00am-5:00pm M-F

Patient Representatives 9:00am-5:00pm M-F

Language Assistance Services 24 hours-7 days a week

For additional information or assistance regarding Guest Services at the University of Illinois at Chicago, please

contact: Julio Becerra Director Guest Services 1740 West Taylor Suite 1172

Addendum H: Medical Center / UIC Campus Resources	43

Addendum A: UNIVERSITY OF ILLINOIS STATEMENT OF A DRUG-FREE WORKPLACE

- 1. The University of Illinois is committed to maintaining a drug-free workplace in compliance with applicable state and federal laws. The unlawful possession, use, distribution, dispensation, sale or manufacture of controlled substances is prohibited on University premises. Violation of this policy may result in the imposition of employment discipline as defined for specific employee categories by existing University policies, statues, rules, regulation, employment contracts, and labor agreements. Any employee convicted of a drug offense involving the workplace shall be subject to employee discipline or required completing satisfactorily a drug rehabilitation program as a condition of continued employment.
- 2. The illegal use of controlled substances can seriously injure the health of employees, adversely impair the performance of their responsibilities and endanger the safety and well being of fellow employees, students and members of the general public. Therefore, the University encourages employees who have a problem with the illegal use of controlled substances to seek professional advice and treatment. A list of sources for drug counseling, rehabilitation and assistance programs may be obtained from the Human Resources Department, University Health Service, or the Employee Assistance Service. Employees may obtain this information anonymously either through self-referral or at the direction of their supervisor. Employees who are engaged in work under a federal contract may be required to submit to test for illegal use of controlled substances as provided by the law or regulations of the contracting agency.
- 3. As a condition of employment, employees are asked to abide by this statement. In addition, those employees working on a federal contract or grant must notify their supervisor if they are convicted of a criminal drug offense occurring in the workplace within five days of the conviction. The University will notify the granting or contracting federal agency within 10 days of receiving notice of a conviction of any employee working on a federal contract or grant when said conviction involves a drug offense occurring in the workplace. A copy of this statement shall be given to all employees assigned to a federal con tact or grant.
- 4. This statement and its requirements are promulgated in accordance with the requirements of the Drug-Free Workplace Act of 1988 and shall be interpreted and applied in accordance with this law and the rules and regulations promulgated pursuant thereto.

This is to acknowledge that I have received, read and understand the above "Statement of a Drug-Free Workplace" for the University of Illinois at Chicago.

Sign and date this document, retain a copy for your records and submit the original to your supervisor.

Addendum B: UIMC Confidentiality Agreement Employee/Volunteer/Student

As an employee/volunteer/student at University of Illinois, you may have access to "Confidential Information". The purpose of this agreement is to help you understand your obligations regarding confidential information.

Confidential information is protected by Federal and State laws, regulations, including HIPAA, the Joint Commission on Accreditation of Healthcare Organizations standards, and strict University policies. The intent of these laws, regulations, standards and policies is to insure that confidential information will remain confidential - that is, that it will be used only as necessary to accomplish the purpose for which it is needed.

As an employee/volunteer/student, you are required to conduct yourself in strict conformance with applicable laws, standards, regulations and University polices governing confidential information. Your principal obligations in this area are explained below. You are required to read and to abide by these rules. Anyone who violates any of these rules will be subject to discipline, which might include, but is not limited to, termination of employment or expulsion from the University. In addition, violation of these rules may lead to civil and criminal penalties under HIPAA and potentially other legal action.

As an employee/volunteer/student, you may have access to confidential information, which includes, but is not limited to, information relating to:

- Medical record information (includes all patient data, conversations, admitting information, demographic information and patient financial information).
- Protected Health Information (PHI) as defined by HIPAA includes, but is not limited to, names, all geographic subdivisions; all elements of dates (except year) for dates directly related to an individual, telephone numbers, fax numbers, electronic mail addresses, social security numbers, medical record numbers, health plan beneficiary numbers, account numbers, certificate/license numbers, vehicle identifiers, device identifiers and serial numbers, web universal resource locators (URLs), internet protocol (IP) address numbers, biometric identifiers, including finger and voice prints, full face photographic images and any comparable images; and any other unique identifying number, characteristic, or code.
- Employee information (i.e., social security number, employment records, and disciplinary actions).
- University information (i.e., financial and statistical records, strategic plans, internal reports, memos, contracts, quality and peer review information, and communications).
- Computer programs, client and vendor proprietary information, source code, and proprietary technology.

Employees, who have access to electronic medical record in accordance with their job responsibilities may access, view and print their own medical record for the duration of their employment or for the duration of the period that they retain the position that provided them access to electronic medical record. For copies of information not in electronic medical record, employees are required to contact the HIM Department. The Director of HIM is not responsible for actions taken on information printed and released by Medical Center employees.

NOTE:

Employees with this level of access are not permitted to access the medical records of their children, spouses, relatives or friends. Such access is considered a breach of patient privacy and is subject to disciplinary action. Employees who do not have access to electronic medical record must contact the HIM Department to request copies of their medical records.

In the event that you do have access to confidential information, you hereby agree as follows:

- You will only use confidential information/data as needed/necessary to perform your duties as an employee/volunteer/student affiliated with the University.
- You will not in any way divulge, copy, release, sell, loan, review, alter or destroy any confidential information/data except as properly authorized within the scope of your professional activities affiliated with the University.
- You will not misuse confidential information/data or be careless with it.
- You will safeguard and will not disclose your computer password or any other authorization that allows you to access confidential information/data. The University reserves the right to monitor access to the network, including your account, if deemed appropriate.
- You accept responsibility for all activities undertaken using your assigned access code and/or any other authorizations.
- You will report activities by any individual or entity that you suspect may compromise the confidentiality of information. The University will make all attempts possible to keep good faith reports confidential. However, absolute confidentiality cannot be guaranteed.
- You understand that your obligations under this Agreement will continue after your affiliation with the University terminates.
- You understand that any of your access privileges to confidential information/data are subject to periodic review, revision, and, if necessary, modification and/or termination.
- You understand that you have no right or ownership interest in any confidential information/data.
- The University may at any time revoke your access code, or any other authorization that allows you to access confidential information/data.
- You will be responsible for your misuse or wrongful disclosure of confidential information and for your failure to safeguard confidential information/data or your password or any other authorization that allows you to access confidential information/data.
- The University may take disciplinary action against you up to and including termination or expulsion from the University in the event you violate this Confidentiality Agreement. In addition, the University may initiate legal action including but not limited to civil litigation or criminal prosecution.
- You understand the University reserves the right to monitor and record all network and application activity
 including e-mail, with or without notice, and therefore users should have no expectations of privacy in the use of
 these resources.

"I certify that I have read and agree to be bound by it."	I understand the Confidentiality Statem	nent printed above and hereby

Revised 11/09

Addendum C: Non-Discrimination Statement

The commitment of the University of Illinois to the most fundamental principles of academic freedom, equality of opportunity, and human dignity requires that decisions involving students and employees be based on individual merit and be free from invidious discrimination in all its forms.

The University of Illinois will not engage in discrimination or harassment against any person because of race, color, religion, sex, national origin, ancestry, age, order of protection status, genetic information, marital status, disability, sexual orientation including gender identity, unfavorable discharge from the military or status as a protected veteran and will comply with all federal and state nondiscrimination, equal opportunity and affirmative action laws, orders and regulations. This nondiscrimination policy applies to admissions, employment, access to and treatment in the University programs and activities.

University complaint and grievance procedures provide employees and students with the means for the resolution of complaints that allege a violation of this statement. Members of the public should direct their inquiries or complaints to the appropriate equal opportunity office.

For the Chicago campus, Caryn A. Bills, Director of Access and Equity (Title IX, ADA and 504 Coordinator), 717 Marshfield Building, M/C 602, 809 South Marshfield Avenue, Chicago, Illinois 60612-7297, (312) 996-8670, cabw@uic.edu.

Addendum D: Statement of Commitment to Persons with Disabilities

Guided by the belief that people with disabilities are assets to the university, UIC is committed to full inclusion and participation of people with disabilities in all aspects of university life. We seek to provide an academic, social and physical environment that makes disabled people integral to the diversity of perspectives that is vital to an academic community.

UIC supports the principles of universally accessible design, alternative communication formats, and the expression of disability community and pride. At all levels of the university, UIC promotes equal opportunity, fair treatment, and the elimination of barriers for qualified individuals with disabilities.

Implementation

An advisory committee will develop an implementation plan in accordance with the Statement of Commitment to Persons with Disabilities. The committee will monitor progress towards these goals and will seek advice from disability groups on campus. The Office for Access and Equity will report progress and accomplishments on an annual basis and the report will be made public on the campus Web site under Disability Resources.

Addendum E: Infection Control - Personal Protective Equipment

What is Personal Protective equipment?

Personal protective equipment (PPE) is equipment you wear to protect you from exposure to potentially hazardous materials. The Bloodborne Pathogens Standard refers to PPE as equipment that protects your skin, mucous membranes and personal clothing from contamination with blood, body fluids, secretions or excretions. Examples of PPE include: gloves, fluid-resistant gowns, masks, impervious aprons, lab coats, protective eyewear, mouthpieces, resuscitation bags or other ventilation devices.

Gloves

When to wear gloves

Gloves should be worn when your hands may come in contact with blood, body fluids, secretions, excretions, mucous membranes or non intact skin. Gloves should not be worn in non patient care areas (i.e. public corridors).

Single-use gloves

In general, non latex gloves can be used for most patient care and laboratory activities. These gloves are designed as single-use items, are available in various sizes and should be discarded after use. If gloves tear or puncture during use, remove them as soon as possible, wash hands, and put on a new pair of gloves.

Reusable gloves

Utility or work gloves may be available for heavier tasks, such as hauling waste, housekeeping, or working with chemicals. These gloves may be reused but should be cleaned and disinfected after each use, and stored in a sanitary fashion. If cracks or other breaks in integrity develop in these gloves, they should be discarded. Carefully remove reusable gloves in a manner so that your hands do not touch the contaminated surfaces of the glove. Wash hands after the gloves are cleaned and disinfected. Store gloves in select area(s) as per department policy.

Glove allergies

UIMC supplies latex-free gloves for employee use. If you have allergies or special requirements, contact you supervisor to discuss what options are available.

Skin lesions and gloves

Skin lesions such as cuts or scrapes on your hand should be covered with a dressing or bandage before gloves are applied.

Removal of Gloves

Gloves should be removed from your hands in a way that decreases the likelihood of your skin or mucous membranes being exposed to blood, body fluids, secretions or excretions. For single-use gloves, first point your hands downward, away from your face, and then grasp the outside of the cuff with the opposite gloved hand. Remove that glove slowly by turning it inside out. Gather the removed glove into the palm of the gloved hand. Then slip the ungloved finger underneath the cuff on your other hand, and roll that glove inside out over the other glove. Discard the used gloves into the appropriate waste receptacle and wash hands.

Handwashing/Hand Antisepsis

After gloves have been removed, use an alcohol based hand rub product, or hands should be washed with soap and water. The use of gloves does not replace the need for appropriate hand hygiene. Gloves do not completely protect your hands from becoming contaminated either during use or during removal.

Fluid-Resistant Gowns and Aprons

When to wear protective apparel

Protective apparel should be worn when there is a reasonably anticipated possibility that blood, body fluids, secretions or excretions may splatter onto your personal clothing. If splattering is likely, then a fluid-resistant gown or lab coat, barrier gown, or plastic apron should be worn, depending on the task or circumstances.

Barrier Gowns/Impervious gowns

Barrier gowns or impervious gowns/aprons should be worn anytime there is a reasonable likelihood that splattering of blood, body fluids, secretions or excretions may occur. This is particularly true in circumstances when exposure to large amounts of blood is anticipated (i.e., trauma situations, labor and delivery, surgery). They should be worn, so that the gowns tie in the back. After use, they should be removed in a manner that does not contaminate your clothing or skin. The gowns are disposable. Gowns should be placed into the appropriate receptacle after use. If blood, body fluids, secretions, or excretions penetrate the gowns, or if torn, the garments must be removed /contained as soon as possible. Exposed skin surfaces should be either washed with soap and water or cleansed with an antiseptic towelette.

Masks and protective eyewear

When it can be reasonably anticipated that blood, body fluids, secretions or excretions will splash or splatter into your eyes, nose or mouth (mucous membranes); protective eyewear and a mask must be worn. Goggles or safety glasses with solid side-shields paired with a mask are one choice. Alternatively, you could wear a face shield or full-face visor. Personal prescription eyeglasses, without solid-side shields, do not provide adequate eye protection. Safety glasses or goggles should not be worn without a mask. Reusable protective eyewear and visors should be appropriately disinfected after use.

Resuscitation devices

Unprotected mouth-to-mouth resuscitation should never be performed. A mouth shield or a mechanical device should be utilized.

Removal of PPE

PPE should be removed when you complete the task for which you garbed. PPE must be removed when you leave the area in which exposure was anticipated. PPE should not be worn in public areas such as hallways.

Questions?

Refer to the Exposure Control Plan in your Infection Control Manual which is accessible at http://www.hospital.uic.edu under UI Medical Center tab, "Infection Control and Isolation" Questions not addressed in this document can by answered by any Infection Control Practitioner at x6-0082 or x5-2518.

University of Illinois Medical Center Infection Control Program 1855 W Taylor Street, M/C 770 Chicago, Illinois 60612 Phone (312) 996-0082 Fax (312) 996-1438

Addendum F: Infection Control - Bloodborne Pathogen Standard

What is the bloodborne pathogen standard?

The Bloodborne Pathogen Standard (29 CFR 1910.1030) was published in 1991 by the Occupational Safety and Health Administration (OSHA) to protect employees from acquiring bloodborne diseases while at work.

To whom does the standard apply?

This Standard applies to anyone who has reasonably anticipated exposure to bloodborne pathogens as a result of performing his/her job duties.

What is the exposure control plan?

The exposure control plan is UIMC's plan for implementing the Bloodborne Pathogen Standard. It is located in the Infection Control Manual available on the hospital intranet and contains information on the following topics:

- 1. Standard precautions
- 2. Engineering controls
- 3. Work practice controls
- 4. Personal protective equipment.
- 5. Hepatitis B vaccine
- 6. Housekeeping
- 7. Labeling of biohazard material
- 8. Post-exposure follow-up
- 9. Education and training

What is a bloodborne pathogen?

A bloodborne pathogen (BBP) is an infectious agent that can be present in human blood and other body fluids that is able to cause disease in humans. Some examples are: Hepatitis B virus (HBV), Human Immunodeficiency virus (HIV) and Hepatitis C Virus (HCV).

Where are bloodborne pathogens found?

The following fluids may contain bloodborne pathogens:

- 1. Blood and blood products
- 2. Semen and vaginal secretions
- 3. Cerebrospinal fluid
- 4. Synovial fluid
- 5. Peritoneal fluid
- 6. Pericardial fluid
- 7. Amniotic fluid
- 8. Saliva (in dental procedures)
- 9. Any unfixed human tissue or organ,
- 10. Any body fluid visibly contaminated with blood.

The following excretions usually do not contain bloodborne pathogens:

- 1. Feces
- 2. Urine
- 3. Sputum
- 4. Sweat

How do I decrease my risk of acquiring bloodborne diseases at work?

- 1. Follow Standard Precautions
 - Standard precautions (formerly Universal Precautions) means you assume that all blood, body fluids, secretions, excretions, mucous membranes and non-intact skin are potentially infectious, regardless if you know the patient has a disease or not.
- 2. Use Engineering Controls
 - Engineering controls are physical or mechanical systems that UIMCC provides to eliminate hazards at their source. Examples include: self-sheathing needles, sharps disposal containers, biosafety cabinets and autoclaves.
- 3. Apply Work Practice Controls
 - Work practice controls are the way you do your job to decrease your risk of being exposed. Some examples include, handwashing, not recapping needles and not eating or drinking in patient care or areas where equipment and specimens are handled.
- 4. Use Personal Protective Equipment (PPE)
 - PPE is equipment that protects your skin, mucous membranes and personal clothing from contamination with potentially infectious material and includes the following: gloves, masks, gowns, aprons, lab coats, protective eyewear, face shields, mouthpieces, resuscitation bags or other ventilation devices. You should wear the appropriate PPE for the task. For example, if splattering of blood or body fluid is anticipated, you should wear gloves, a fluid-resistant gown, and a mask with protective eyewear, or face shield. If PPE becomes torn or otherwise compromised during use, remove it as soon as possible and wash the affected site.
- 5. Obtain the Hepatitis B Vaccine
 - The Hepatitis B vaccine is available free of charge at University Health Services (UHS). It comes in a series of three injections at 0, 1 and 6 months. Approximately 90 percent of people, who obtain the vaccine series, develop immunity to the Hepatitis B Virus. The primary side effect of the Hepatitis B vaccine is soreness at the injection site. You should obtain the vaccine if you may be exposed to BBP during your regular job activities. If you refuse to obtain the vaccine, you must sign the Hepatitis B Declination Form. You may, however, at a later date, change your mind and obtain the vaccine.
- 6. Perform Good Housekeeping
 - Clean and disinfect all surfaces and equipment that have contact with blood or body fluids. Use tongs, two-pieces of cardboard or a brush and dust pan to pick up broken glass. Never use your hands. Items that are grossly soiled with blood or other body fluids are potentially infectious for BBP and should be placed into red bags. "Grossly" soiled means the body fluid can be released either in liquid or dried form from the object that is being discarded. Sharps and glass should be discarded into puncture-resistant sharps disposal container.
- 7. Label Biohazard Materials and Locations

Containers that contain biohazard material should be appropriately labeled with the international biohazard sign:

or the color red (e.g., red bags). Areas that handle biohazard material, such as laboratories, should have a biohazard label at the entrance to the laboratory. Any equipment that is contaminated with BBP and is being sent to an outside agency for servicing, should be labeled "Contaminated" or with a biohazard label.

8. Follow post-exposure protocol

When your skin or mucous membrane is exposed to blood or other fluids that may contain BBP, you must act STAT:

- S- Scrub. If you stick your finger, scrub the site. If you splash blood into your eye, wash your eye with running water.
- T- Tell your supervisor that you have been exposed. This is an emergency and you will need to leave your work area to seek treatment after patient care is transferred to a colleague.
- A- Ask your supervisor or the patient's physician to have the patient's blood drawn, if the source-patient of the exposure is known.
- T- Treatment. Seek follow-up care and treatment at UHS. If UHS is closed, go to the Emergency Department.
- 9. Educate yourself on the Standard Complete annual required mandatory education. Learn the engineering and work practice controls in your area. If you have questions about a certain work practice or engineering control, ask your supervisor for additional information or training.

QUESTIONS?

Refer to your Exposure Control Plan available in hard copy in your department or accessible at: http://www.hospital.uic.edu under UI Medical Center tab, "Infection Control and Isolation" or phone x6-0082 or x5-2518.

Addendum G: Infection Control - Tuberculosis - How to Protect Yourself & Others

What is TB?

Tuberculosis (TB) is an infection caused by the bacterium Mycobacterium tuberculosis (MTB)

How is TB spread?

TB is spread through the air when persons with active respiratory (lungs, throat) TB disease coughs, sneezes, speaks or sings. Infection occurs when a nearby susceptible host inhales MTB, and the bacteria reach the tiny air sacs (alveoli) of the lungs and begin to grow. Infection can occur at any body site (e.g., kidneys, bone, brain) but usually occurs in the lungs. TB in other parts of the body is not infectious.

How does infection differ from disease?

People infected with TB, who are not sick, have latent TB infection (LTBI) and can't spread TB to others. MTB is in the body, inactive and the immune system has contained it. The person may have a positive TB skin (PPD) test or a positive blood assay for MTB (BAMT). People with LTBI can develop active TB disease without proper treatment. If the person does develop active disease they may then be infectious.

Who is at increased risk of infection?

- Homeless
- Substance abusers (IV drugs, alcoholics)
- People with weakened immune systems (diabetes mellitus, cancer, elderly, etc.)
- Persons living in institutional settings (correctional facilities, shelters, nursing homes, etc.)
- Persons from countries where active TB disease is common (Asia, Africa, the Caribbean, Latin America, Middle East and Eastern Europe)

Who is at highest risk of developing active TB?

Individuals with a weakened immune system (children <4 years of age, the elderly) because the bacteria can't be contained by the immune system and begin to grow. Certain medical conditions (e.g., diabetes, cancer, kidney disease, HIV, etc.) and treatments (Corticosteroids, organ transplant, Crohn's disease medicines, etc.) can weaken the immune system.

How do I identify persons with active TB?

Symptoms of TB depend on the site of infection. Active respiratory TB is the most infectious form and can include the following symptoms:

- Prolonged (≥ 3 weeks), productive cough
- Hemoptysis (coughing up blood)
- Chest pain
- Weakness or fatigue
- Unexplained weight loss
- Fever
- Chills
- Night sweats

Patients with any or all of the symptoms should be suspected of having active TB disease and should receive further medical evaluation.

What TB screening tests are available?

- The TB skin test: injection of fluid called tuberculin or PPD (purified protein derivative) into the skin, in the lower part of the arm. The test is read in 2-3 days by looking for a reaction (induration).
- Quantiferon-TB® Gold (QFT-G): measures the immune system reaction to TB proteins mixed with blood. This is a blood assay for MTB (BAMT) type of test and the methodology used at UIMC.

A positive reaction for either test does not indicate active TB disease and further testing will need to be performed.

Diagnosis of active TB disease is made based on the medical history, symptoms, screening test results, chest x-ray (CXR) results, and sputum culture and/or smear results.

A CXR is used to detect chest abnormalities that may suggest or rule out pulmonary TB. Typical CXR findings include an infiltrate or cavity (an area with millions of bacteria) in the upper lobe or superior segment of the lower lobe. The CXR of an HIV infected person with TB may be atypical - it may even appear clear.

Positive smears do not confirm a diagnosis of TB, but indicate the presence of Mycobacterium species (the MTB family). Growth of MTB in culture is the only definitive diagnostic test. Respiratory specimens should be collected in the early morning, on 3 consecutive days. To obtain a good specimen, patients should be instructed to breathe and cough deeply. The smear results are available within 24 hours.

Patients with symptoms, a cavitary lesion on CXR, positive smear results, and MTB growing in culture are highly infectious because they are spreading large amounts of bacteria into the air with each cough. The more MTB there is in the lungs, the higher the amount of bacteria seen on a specimen smear. People with negative smear results may not be as infectious. The number of MTB present in sputum at any given time can be different so a patient should have at least three negative sputum specimens before TB infectivity can be ruled out. MTB is a slow growing organism that can take 2-6 weeks to grow.

Once I identify someone as having TB, how do I stop it from spreading?

Prompt identification, airborne isolation and treatment of persons with active TB disease are the best way to control the spread.

When TB is <u>suspected</u>, a patient should be placed in an Airborne Isolation room, a.k.a. negative pressure room. These pressurized rooms prevent the spread of MTB (hanging in the air) from floating into hallways and rooms. Regular private rooms can be turned into negative pressure rooms by using portable high efficiency particulate air (HEPA) filters, which clean the air.

In waiting areas, persons with a cough should be screened for TB. The TB screening tool provides questions to assist healthcare workers in assessing patients for TB. In the outpatient setting, a surgical mask should be placed on the patient and the patient should be placed in a private examination room with negative air pressure or a HEPA unit, as soon as possible.

In the inpatient setting, a patient with <u>suspected</u> TB should be placed in Airborne Isolation. Both doors of the isolation room must be kept closed. If there are no negative pressure rooms available, the patient may be placed in a private room with a portable HEPA filter (available from Respiratory Services). Patients with <u>confirmed</u> TB must be placed in a negative pressure room. Airborne Isolation requires that all healthcare personnel entering the room wear a fit-tested N95 respirator. Employees unable to wear an N95 respirator must use a powered air-purifying respirator (PAPR). Patients must wear a surgical mask if required to leave the room. All cough- inducing or aerosol producing procedures (sputum induction, bronchoscopy, etc.) performed on suspect or confirmed TB patient(s) must be done in a negative pressure room.

Patients should be started on appropriate anti-TB treatment. Whenever possible, a four-drug therapy should be initiated. Patients should be instructed on the importance of complying with treatment. If it is suspected that a patient will not comply with therapy once discharged, directly observed therapy (DOT) should be considered. Contact the Infection Control Department or the clinician may contact the Chicago Department of Public Health for information related to DOT.

What do I do if I am exposed to TB?

Persons who have had prolonged, unprotected exposure to TB (i.e., person(s) who have shared the same airspace with another who has active TB disease where neither person was wearing a mask) should contact the Infection Control Department & University Health Service (UHS). A TB Screen test will be performed at the time of exposure (baseline)

and another test 8-12 weeks later (after exposure). All UICMC employees who are TB Screen test negative must repeat the test at least annually. Some employees who work in high-risk areas will be required to have a TB Screen test every 6 months. Employees who are newly identified as TB Screen test positive will be given a medical evaluation that includes a CXR to evaluate the presence of active disease and may be offered prophylactic anti-TB therapy. Persons who are TB Screen test positive should monitor themselves for symptoms of active TB disease and complete a TB signs & symptoms questionnaire from UHS semi-annually.

What if I have further questions about TB?

Additional information about controlling the spread of TB can be found in the "Tuberculosis Prevention and Exposure Control Plan" located in section 8 of the Infection Control and Isolation Procedures Manual accessible online at http://www.hospital.uic.edu under UI Medical Center tab, "Infection Control and Isolation"

Questions?

Questions that are not answered within this plan can be addressed to any of the Infection Control Practitioners in the Infection Control Department at the following numbers: X6-8953 or X5-2518

Summary of Methods to Control known or suspected active TB disease

- Identify symptomatic patients.
- Isolate symptomatic.
- Wear N95 respirators when entering the room of any patient.
- Treat patients with appropriate anti-TB drug therapy.
- Comply with routine and post-exposure TB Screen tests.
